Full Stack Software Engineer with a passion for creating innovative applications. Enjoys pair-programming, team building, and writing functional code. Eager to learn new stacks, leverage fluency in Russian and Ukrainian and to impact the world of software engineering. Excellent skills in design, object-oriented programming and relational database systems.

Technical Projects

CarFinder - [GitHub](#) / [Live Demo](#)

CarFinder is an application for anyone who is interested in listing a vehicle and receiving feedback from other users.

- Built with a Ruby on Rails Front End / Back End
- Styled application with Custom CSS
- Secured authentication with bcrypt
- Implemented full CRUD and MVC patterns

NoteMinder – [GitHub](#) ([Front End](#) / [Back End](#))

NoteMinder is an application that takes Apple's "Notes" and "Reminder" applications and combines the utility of both applications.

- Built with pure Vanilla JavaScript
- Developed a Rails API
- Utilized custom CSS styling
- Integrated a reminder feature with an alarm sound-emitting function

FishLand - [Live Demo](#) / [GitHib](#)([Front End](#) / [Back End](#))

FishLand is an application that takes information about fishing and allows users to discover fish species along with good information about the fish and how to go fishing for it.

- Built with Vanilla Javascript along with React and Redux
- API and Back End built using the Mechanize Scraper and Ruby on Rails
- Custom CSS styling
- User Authentication along with User Bookmarking features.
